EXP 3:

AIM:

To perform Data Manipulation Language (DML) commands such as INSERT and SELECT to populate the five tables (STUDENT2, STUDENT3, FACULTY, DEPARTMENT, COURSE) with data and retrieve all records from them.

DML Commands – (INSERT, SELECT)

ALGORITHM:

1. Start and connect to the csa05_lab database using USE csa05_lab;.
2. Insert additional records into STUDENT2 using INSERT INTO statements.
3. Insert additional records into STUDENT3, ensuring RegNo values already exist in STUDENT2 (foreign key rule).
4. Insert additional records into FACULTY, ensuring Gender values are 'M' or 'F' (CHECK rule).
5. Insert additional records into DEPARTMENT.
6. Insert additional records into COURSE, ensuring SemNo is between 1 and 6 (CHECK rule).
7. Use SELECT * FROM table_name; to view all records in STUDENT2.
8. Use SELECT * FROM table_name; to view all records in STUDENT3, FACULTY, DEPARTMENT, and COURSE.
9. Verify that all inserted data satisfies the constraints applied in the previous experiment.
10. Stop.

QUESTIONS:

1. Populate all the five tables with your own data.
2. View all the records from the five tables.

OUTPUTS:

RESULT:

Data Manipulation Language (DML) commands such as INSERT and SELECT were successfully executed on the five tables (STUDENT2, STUDENT3, FACULTY, DEPARTMENT, COURSE) — records were inserted satisfying all existing constraints, and all data was successfully retrieved and verified using SELECT statements.
